 MICROWAVE PHASE SHIFTER WITH DIELECTRIC
 PRISMS. (1961) 11 p. 14 refs.
 Order from SI 5 \$1.90

Trans. of American Institute of Physics, 1961, v. 38,
 p. 409-418

DESCRIPTION: "Microwave equipment. Phase
 shifters, dielectric. Prisms (Optics)"

A new type of microwave phase shifter is
 described, which handles sections of variable length.
 In this device, a dielectric plate, with parallel faces
 passes through two longitudinal slots on the inner
 faces of a rectangular waveguide. The plate is
 formed of two identical prisms placed in opposition.
 The displacement of one of the prisms relative to the
 other along the hypotenuse, changes the effective
 length of the dielectric plate within the guide, with a
 (Engineering-Electronic TT, v. 8, no. 9) (over)

1. Trumbly, R.

625869

Office of Technical Services

consequent shift of the wave that traverses this quadrupole. The possibility of designing a phase shifter of this type using only a single prism is also discussed. The characteristics of this type of variable phase shifter are as follows: high phase resolution, 0.7°; easy matching, S.W.R. of 1.05; weak sensitivity to frequency variations; phase shift linear with respect to the displacement of one of the prisms; and very simple mechanical construction.
